

FreshCart - Grocery Delivery App UX Case Study

1. Project Overview

FreshCart is a grocery delivery mobile application UX project designed to create a simple, fast and convenient online grocery shopping experience.

Problem Statement:

Users face problems such as complicated navigation, difficulty finding products, slow checkout processes and unclear order tracking.

Objectives:

- Create an easy grocery shopping experience
- Improve product discovery
- Reduce checkout time
- Provide better order tracking

Target Users:

- Students
- Working professionals
- Families
- Elderly users

Tools Used:

- Figma
- FigJam
- Canva
- Draw.io

2. User Research

Research Methods:

- Surveys
- User Interviews
- Competitive Analysis

Common User Pain Points:

- Difficult product search
- Too many checkout steps
- Lack of delivery updates
- Poor product organization

3. User Persona

Name: Ananya

Age: 22

Occupation: Student

Goals:

- Buy groceries quickly
- Save time
- Easy payment

Frustrations:

- Complicated applications
- Long checkout process

4. Empathy Map

Says:

"I need groceries delivered quickly"

Thinks:

"Shopping should not take too much time"

Does:

Uses mobile applications for daily needs

Feels:

Frustrated with complicated ordering systems

5. Information Architecture

App Structure:
